

Decorative Cover Glass for Car-mounted Displays

Seat-back Displays and Door Armrest Displays

AGC

Your Dreams, Our Challenge

Decorative Cover Glass for Car-mounted Displays: Seat-back Displays

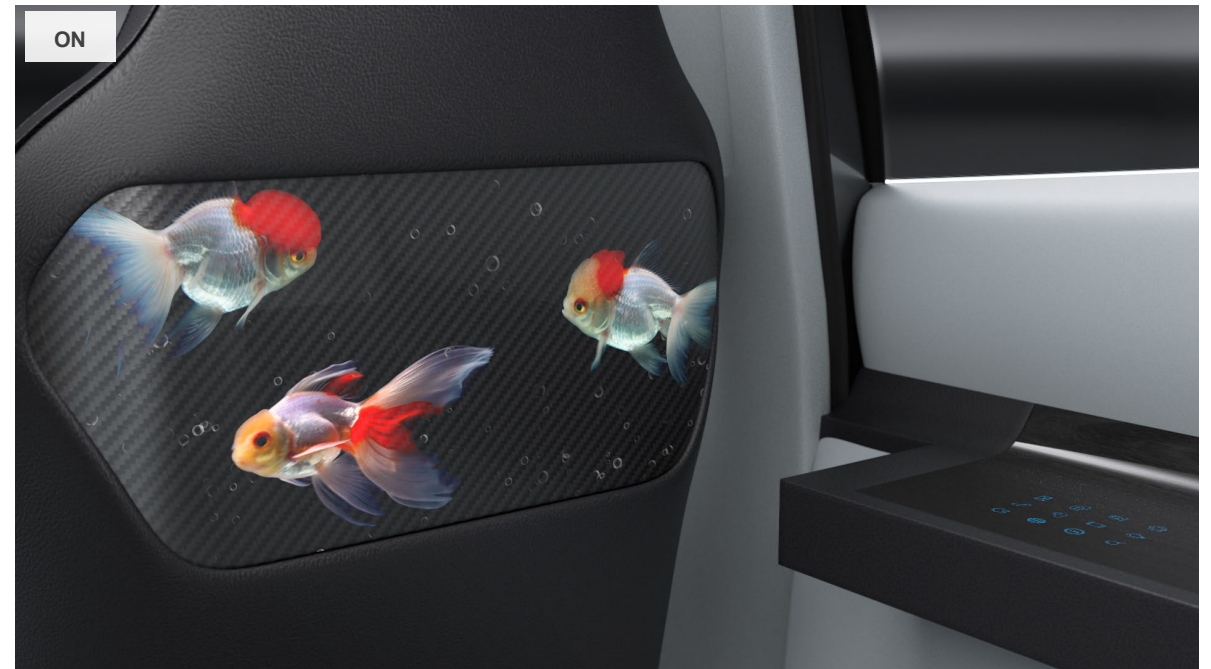

Next-generation displays that blend into spaces elegantly

YouTube 

When the display is off

Smoothly curved and decorated cover glass is integrated seamlessly with the seat back, hiding the display that lies behind the glass. Its high-end texture and design features that enhance the interior come together to create a luxurious space.

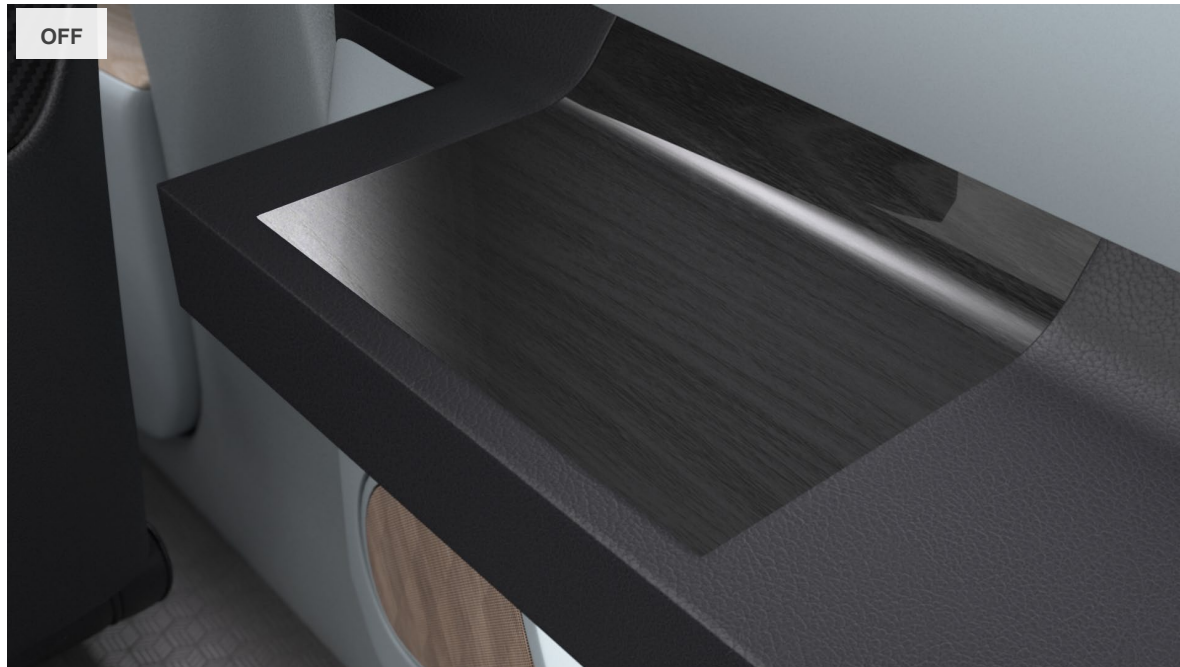

When the display is on

The decorative film's transparency allows the viewer to enjoy detailed image quality unhindered by its design. In addition, the glass surface is treated to reduce reflections for easy viewing even when light enters the vehicle.

Decorative Cover Glass for Car-mounted Displays: Door Armrest Displays

The comfortable feel and operability of glass combined with high scratch resistance for unchanging beauty

When the display is off

The decorated cover glass blends into the door armrest without calling attention to itself as a display. When an arm is placed on the armrest, the glass offers a smooth, comfortable feel.

When the display is on

In addition to enabling smooth and sensitive touch controls, the display's clarity, transparency, and beauty is maintained by its scratch-resistance. It is also fingerprint-resistant, giving it a clean look.

Integrating glass's texture, aesthetics, and functionality through AGC's technologies in material development, product design, and production

■ 3D-formed cover glass

- Complex three-dimensional molding technology creates smooth curves
- Chemically strengthened glass enables high scratch resistance and durability
- Anti-glare treatment reduces reflections
- Anti-fingerprint coating reduces fingerprint visibility to maintain aesthetics

■ Decorative film (special transparent printing film)

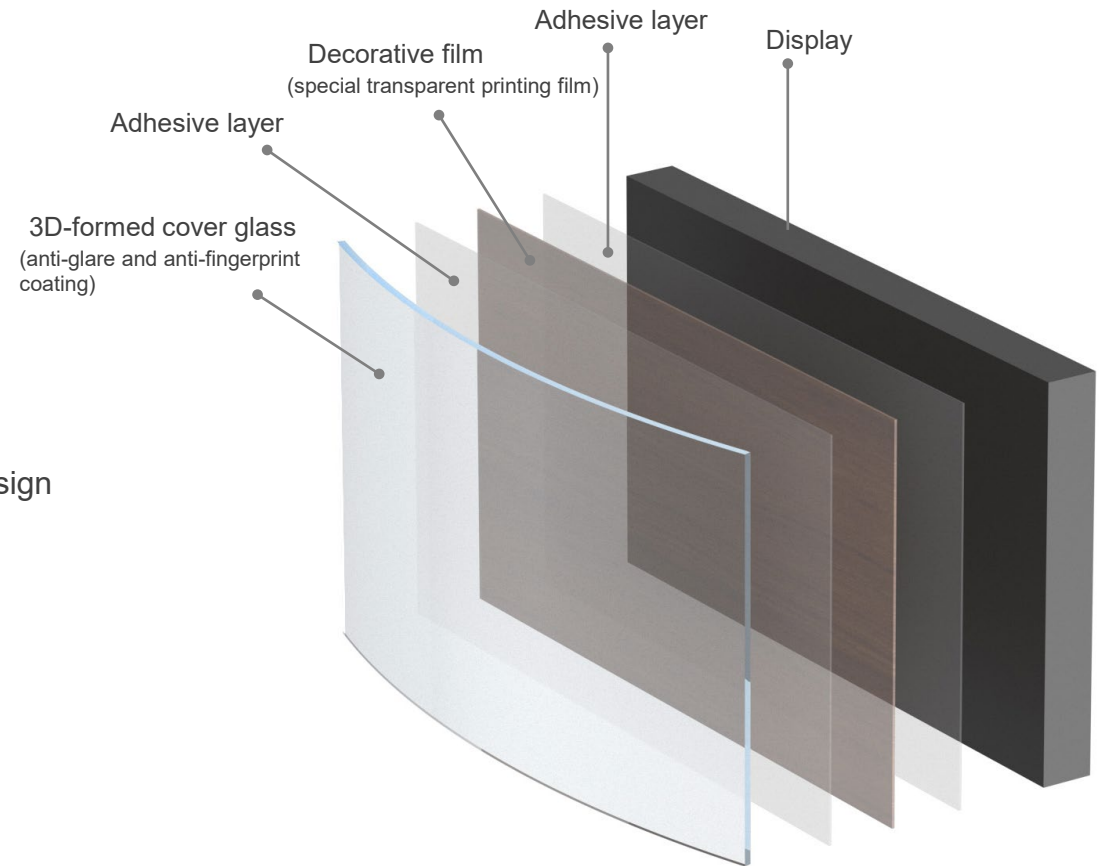

- Special ink printing process enables light transmittance of over 60%
- Achieves high-quality color reproduction for display images while maintaining the design aesthetics of the decorative film

■ Displays

- A wide range of displays can be used, including LCD and OLED

■ Intended applications

- Instrument panels, seat-back displays, armrests, etc.
